(54) Title: WINDSCREEN WIPER DEVICE

(57) Abstract: A windscreen wiper device (1) comprising an elastic, elongated carrier element, as well as an elongated wiper blade (2) of a flexible material, which can be placed in abutment with a windscreen to be wiped, which wiper blade (2) includes opposing longitudinal grooves (3) on its longitudinal sides, in which grooves spaced-apart longitudinal strips (4) of the carrier element are disposed, wherein neighbouring ends (5) of said longitudinal strips (4) are interconnected by a respective connecting piece (6), which windscreen wiper device comprises a connecting device (7) for an oscillating wiper arm, with the special feature that at least one connecting piece (6) comprises engaging members (15) engaging around the longitudinal strips (4) so that said strips (4) are mounted in grooves (16) formed by said engaging members (4), wherein said strips and said connecting piece (6) are slidably connected by means of a snap connection.
